BERRIES OF VIBURNUM OPULUS
(Highbush Cranberry)

FALL PLANTING

1848 ♦ 1935

HOYT NURSERIES
NEW CANAAN, CONN.

Fruits of *Euonymus*

SHRUBS WITH ATTRACTIVE • BERRIES •

FALL-TIME is berry-time for shrubs and fruit-bearing trees. Many shrubs which have seemed uninteresting for the past two months are now adorned with an abundance of many-colored fruits—red, yellow, orange, blue, white, or black. Fruit-bearing plants run in types such as *Viburnums*, Chinese Crab-Apples, Dogwoods, Honeysuckles, *Cotoneaster*, and some attractive vines, such as *Euonymus*, Bittersweet, and *Ampelopsis heterophylla*, the Porecelain Vine. The above are only a few of the many varieties popular with gardeners as well as their bird-friends.

Fall is an excellent time to plant almost all varieties, since this ensures their making an early start in the spring.

Fruits of Crab-Apples

Berries of *Lonicera tatarica* (Tatarian Honeysuckle)

Bittersweet. Orange and red berries. Strong, 4-yr. vines, 75 cts. each.

Black Alder. Red berries. Sturdy plants, 3 to 4 ft., \$1.50 each.

LARGE-TREE MOVING

YOU need large trees for beauty and shade. For many years we have been moving large evergreens and shade trees successfully and satisfactorily for owners and landscape architects.

Fall and winter are the best seasons for large-tree moving. You may come to the Nursery and select your own trees or we will gladly estimate on moving trees on your place.

Our modern equipment permits us to do this work economically and carefully. We will gladly call and give our advice without any obligation on your part.

Your best guarantee of success in large-tree moving is our knowledge and experience gained by moving thousands of trees during the past fifty years.

Berries of
Celastrus scandens
(American
Bittersweet)

TREES THAT MAKE SHADE

Fall planting is best for almost all shade trees. Our Nursery has an excellent assortment of the better varieties for this locality. Why not plan to plant a few of these each fall?

Medium-sized specimens, which may be had for a moderate price, will develop into large trees within a few years.

It is always better to see these trees growing in the Nursery before deciding what varieties or sizes are best suited for your locations.

A visit from you is always welcomed.

ACER PLATANOIDES (Norway Maple). 10 to 22 ft., \$3.50 to \$40 each.

FAGUS SYLVATICA ATROPURPUREA (Copper Beech). 8 to 15 ft., \$7.50 to \$50 each.

PLATANUS ORIENTALIS (Oriental Plane). 10 to 25 ft., \$3.50 to \$50 each.

QUERCUS PALUSTRIS (Pin Oak). 8 to 20 ft., \$5 to \$50 each.
